Midterm Proposal Explanation

For my final project I would like to create a portfolio site to upload and display my other projects on, to be viewed by potential employers. This site will be directed to by links in my resume and application sites. The projects I wish to display on this website include digital images of artwork, playblasts and renderings of 3d models, download links to visual novels, twine games and other written works, screen captures of interactive applications, video productions, and various images of designs and design prototypes. Many of the works will also warrant a description. Both the breadth and amount of work may be expanded on in the future. It is also my hope that the website can also be a work unto itself to demonstrate my abilities.
